| 16.00 | <b>Close</b>  |                          |

## Parallel Sessions

*Teams presenting work include:*

### **Orthopaedics Team, Hull**

*Antonio Ramirez & Carole Chapman*

This presentation looks at creating a culture of safe prescribing including transcribing of medication and reasons for delays when patients are admitted. Antonio and Carole will describe the challenges they encountered using real life examples and their exciting ideas for the future.

### **Theatres Team, York**

*Donna Sykes & Victoria Elletson*

This presentation will discuss the methods of how the team implemented the Surgical Checklist for surgical emergencies in the acute setting, despite initial scepticism from staff that 'it couldn't be done'.

### **Park Lodge Nursing Home, Leeds**

*Louise Taylor & Colleague*

This care home team will describe how they improved the oral care of their residents and how the carers and staff became empowered to provide mouth care in different circumstances.

### **Rowan Ward, Mental Health**

*Jim Chapman & Colleague*

The Rowan Ward team will discuss the innovative methods they used to reduce the number of self-harm incidents that were occurring on the ward. They will describe the positive effects that their interventions had not only on patients but also staff.

### **Windhill Green Medical Centre**

*Dr Jane Petty*

The practice wanted to improve the communication of changes to dosette box prescriptions (including those made by secondary care) between GP practice team and local pharmacy.

### **Acute Medical Floor, Leeds**

*Carla Cardiz and Colleague*

The team will describe their successes and challenges they encountered when they implemented an identifiable system for prioritisation of acutely ill patients across the Acute Floor.

*Ali Cracknell* will then present the work above and the positive wider effects that this had on the Leeds Teaching Hospital Trust as a whole and their efforts towards ensuring sustainability and spread.

### **VTE Team, Doncaster**

*Tracy Evans-Philips*

This team will be describing the methodological work they undertook around lack of consistent VTE risk assessment and timely prescribing and administration. This team will be able to show their actions and interventions, how they were achieved and the positive impact that this had on this patient safety issue.
